Professional Summary

Data Analyst with 2+ years of professional experience translating complex business and operational data into actionable insights that drive measurable outcomes. Strong SQL and Python proficiency applied to large-scale transactional datasets. Experienced cross-functional collaborator with a bias for action, financial acumen, and a self-starter approach to ambiguous, fast-moving environments. AWS re:Invent Grant Recipient with hands-on exposure to AI-assisted analytics and business intelligence tools.

Education

Texas A&M University, Master of Science in Computer and Information Science, GPA: 3.93/4.0 May 2024 – December 2025
Visvesvaraya Technological University, Bachelor of Engineering in Computer Science, GPA: 3.6/4.0 August 2019 – May 2023

Technical Skills & Certifications

Analytics & BI: Business Data Analysis, Reporting & Insights, KPI Development, Trend Analysis, Financial Modeling

SQL & Databases : Advanced SQL (Window Functions, CTEs, Joins, Aggregations), PostgreSQL, MySQL

Python : Pandas, NumPy, data analysis, scripting, process automation, REST API integrations

Reporting Tools : IBM Cognos and Planning Analytics, Power BI, Dashboard Development, Amazon Quicksight

Cloud & DevOps : AWS (S3, Lambda, RDS, EC2), GCP (BigQuery), Git, GitHub Actions, CI/CD, Docker

Workflow & Process : Vendor Insights, Stakeholder Presentations, QBR Reporting, Process Optimization, Agile/Scrum

Certifications: Google Cloud Associate Cloud Engineer, Apache Airflow 3

Work Experience

Data Analyst / Systems Engineer, Bay Ltd. – Texas

June 2025 – Present

- Own end-to-end analytics workflows across 3+ operational business units from data extraction and transformation to executive-ready reporting supporting decision-making for senior leadership.
- Wrote and optimized 40+ complex SQL queries (CTEs, window functions, multi-table joins) against large operational databases, reducing average report generation time by 35%.
- Build and maintain recurring reporting dashboards tracking 10+ business KPIs across operations, enabling leadership to identify performance gaps and reallocate resources with confidence.
- Support pre-production UAT cycles for 2 major pipeline deployments, validating data accuracy across 500K+ records and ensuring zero critical errors in production rollout.

Graduate Research Engineer, Texas A&M University – Texas

June 2024 – May 2025

- Designed and executed ETL pipelines processing 1M+ research data records using Python and SQL, reducing data preparation time by 40% and enabling faster research turnaround.
- Implemented 15+ data quality validation checks across ingestion pipelines, achieving 99%+ data accuracy rates and eliminating downstream reporting errors
- Proactively identified and resolved 3 critical data pipeline bottlenecks, improving overall system throughput by 30% and ensuring on-time delivery of research milestones.

Analytics Engineer, Bootstrap Sports India Pvt Ltd. – Bengaluru, IN

June 2023 – May 2024

- Analyzed transactional and sales datasets of 2M+ records to surface insights on pricing, product performance, and market trends, directly informing quarterly business strategy.
- Delivered 20+ executive-ready PowerPoint presentations and deep-dive reports for client meetings and quarterly business reviews (QBRs), earning positive feedback from 100% of key accounts.
- Reduced pipeline processing time by 25% through SQL query optimization and data architecture improvements, enabling same-day insight delivery for high-priority client requests.
- Partnered directly with clients to scope analytical projects, define success metrics, and manage deliverable timelines maintaining on-time delivery across 95%+ of project engagements.

Thesis & Project Experience

Scalable Data Integration & Analytics Platform: Built a multi-source data integration platform using Python and SQL, improving query performance by 30% and reducing time-to-insight for business stakeholders by 2+ hours per reporting cycle. Developed REST API integrations and automated reporting templates that standardized analytical output across teams, improving cross-functional data consistency and reducing ad-hoc requests by 40%.
